## GATE 2017

Computer Science \& Information Technology

## Questions with Detailed Solutions

## FORENOON SESSION

All Queries related to GATE - 2017 key are to be send to the following email address hyderabad@aceenggacademy.com | Contact Us : 040-23234418, 19, 20

1. Threads of a process share
(A) global variables but not heap
(B) heap but not global variables
(C) neither global variables nor heap
(D) both heap and global variables
2. Ans: (D)

Sol: Threads of a process share code section, data section (global variables) and heap but not stack and registers.
02. Let T be a binary search tree with 15 nodes. The minimum and maximum possible heights of T are: Note: The height of a tree with a single node is 0 .
(A) 4 and 15 respectively
(B) 3 and 14 respectively
(C) 4 and 14 respectively
(D) 3 and 15 respectively
02. Ans: (B)

Sol:

03. The n -bit fixed-point representation of an unsigned real number X uses f bits for the fraction part. Let $\mathrm{i}=\mathrm{n}-\mathrm{f}$. The range of decimal values for X in this representation is
(A) $2^{-f}$ to $2^{f}$
(B) $2^{-f}$ to $\left(2^{f}-2^{-f}\right)$
(C) 0 to $2^{f}$
(D) 0 to $\left(2^{\mathrm{f}}-2^{-\mathrm{f}}\right)$
03. Ans: (D)

Sol: Real number size is n bits.
Type of data is unsigned
Fraction part size $=\mathrm{f}$ bits
Integer part size $=(n-f)$ bits

Range of the Decimal values for only integer part is $\left(0\right.$ to $\left.2^{i}-1\right)$
Range of the Decimal values for only fraction part is $\left(0\right.$ to $\left.\left(1-2^{-f}\right)\right)$
Range of the Real number is 0 to $\left(2^{i}-1+1-2^{-f}\right)$

$$
=0 \text { to }\left(2^{\mathrm{i}}-2^{-\mathrm{f}}\right)
$$

4. The following functional dependencies hold true for the relational schema $\mathrm{R}\{\mathrm{V}, \mathrm{W}, \mathrm{X}, \mathrm{Y}, \mathrm{Z}\}$ :

$$
\begin{aligned}
\mathrm{V} & \rightarrow \mathrm{~W} \\
\mathrm{VW} & \rightarrow \mathrm{X} \\
\mathrm{Y} & \rightarrow \mathrm{VX} \\
\mathrm{Y} & \rightarrow \mathrm{Z}
\end{aligned}
$$

Which of the following is irreducible equivalent for this set of functional dependencies?
(A) $\mathrm{V} \rightarrow \mathrm{W}$
$\mathrm{V} \rightarrow \mathrm{X}$
$\mathrm{Y} \rightarrow \mathrm{V}$
$\mathrm{Y} \rightarrow \mathrm{Z}$
(B) $\begin{aligned} \mathrm{V} & \rightarrow \mathrm{W} \\ \mathrm{W} & \rightarrow \mathrm{X}\end{aligned}$
(C) $\mathrm{V} \rightarrow \mathrm{W}$
$\mathrm{V} \rightarrow \mathrm{X}$
$\mathrm{Y} \rightarrow \mathrm{V}$
$\mathrm{Y} \rightarrow \mathrm{X}$
$\mathrm{Y} \rightarrow \mathrm{Z}$
(D)
$\mathrm{Y} \rightarrow \mathrm{V}$
$\mathrm{Y} \rightarrow \mathrm{Z}$

$$
\begin{aligned}
& \mathrm{V} \rightarrow \mathrm{~W} \\
& \mathrm{~W} \rightarrow \mathrm{X} \\
& \mathrm{Y} \rightarrow \mathrm{~V} \\
& \mathrm{Y} \rightarrow \mathrm{X} \\
& \mathrm{Y} \rightarrow \mathrm{Z}
\end{aligned}
$$

4. Ans: (A)

Sol: As $\mathrm{V} \rightarrow \mathrm{W}$, delete W from $\mathrm{VW} \rightarrow \mathrm{X}$ results in $\mathrm{V} \rightarrow \mathrm{X}$
As $\mathrm{V} \rightarrow \mathrm{X}$, delete X from $\mathrm{Y} \rightarrow \mathrm{VX}$ results in $\mathrm{Y} \rightarrow \mathrm{V}$
The irreducible set is

$$
\begin{aligned}
& \mathrm{V} \rightarrow \mathrm{~W} \\
& \mathrm{~V} \rightarrow \mathrm{X} \\
& \mathrm{Y} \rightarrow \mathrm{~V} \\
& \mathrm{Y} \rightarrow \mathrm{Z}
\end{aligned}
$$

5. Consider the following CPU processes with arrival times (in milliseconds) and length of CPU bursts (in milliseconds) as given below:

| Process | Arrival time | Burst time |
| :---: | :---: | :---: |
| P1 | 0 | 7 |
| P2 | 3 | 3 |
| P3 | 5 | 5 |
| P4 | 6 | 2 |

If the pre-emptive shortest remaining time first scheduling algorithm is used to schedule the processes, then the average waiting time across all processes is $\qquad$ milliseconds.
05. Ans: 3

Sol: Gantt Chart:

| P1 | P2 | P4 | P1 | P3 |
| :--- | :--- | :--- | :--- | :--- |
| 0 | 3 | 6 | 8 | 12 |

| Process | Arrival <br> Time <br> (AT) | Burst <br> Time <br> (BT) | Compilation <br> Time(CT) | Turn Around <br> Time(Compilation Time - <br> Arrival Time) | Waiting <br> Time(TAT- <br> BT) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| P1 | 0 | 7 | 12 | 12 | 5 |
| P2 | 3 | 3 | 6 | 3 | 0 |
| P3 | 5 | 5 | 17 | 12 | 7 |
| P4 | 6 | 2 | 8 | 2 | 0 |

Average Waiting Time $=\frac{12}{4}=3$
06. The statement $(\neg \mathrm{p}) \Rightarrow(\neg \mathrm{q})$ is logically equivalent to which of the statements below?
I. $\mathrm{p} \Rightarrow \mathrm{q}$
II. $q \Rightarrow p$
III. $(\neg \mathrm{q}) \vee \mathrm{p}$
IV. $(\neg \mathrm{p}) \vee \mathrm{q}$
(A) I only
(B) I and IV only
(C) II only
(D) II and III only
06. Ans: (D)

Sol: $(\sim p \Rightarrow \sim q)$
$\Leftrightarrow(\mathrm{q} \Rightarrow \mathrm{p})$ (By contrapositive equivalence)
$\Leftrightarrow(\sim q \vee p)(\because(a \rightarrow b) \equiv(\sim a \vee b))$
07. Consider the C struct defined below:
struct data
\{ int marks [100];
char grade;
int cnumber;
\};
struct data student;
The base address of student is available in register R1. The field student.grade can be accessed efficiently using
(A) Post-increment addressing mode, (R1)+
(B) Pre-decrement addressing mode, -(R1)
(C) Register direct addressing mode, R1
(D) Index addressing mode. $\mathrm{X}(\mathrm{R} 1)$, where X is an offset represented in 2's complement 16-bit representation.
07. Ans: (D)

Sol: While finding the grade of the student, it adds the displacement value to the Roll number of the student.

Hence, it is Index Addressing mode.

08. Consider the following C code:

```
#include <stdio.h>
int *assignval (int *x, int val)
{
    *x = val;
    return x;
}
void main ()
{
int *x = malloc (sizeof (int));
if (NULL = = x) return;
x = assignval (x, 0);
if (x)
{
    x = (int * ) malloc (sizeof (int));
    if (NULL = = x) return;
    x = assignval (x, 10);
}
printf("%d\n", *x);
free (x) ;
}
```

The code suffers from which one of the following problems:
(A) compiler error as the return of malloc is not typecast appropriately
(B) compiler error because the comparison should be made as $\mathrm{x}==$ NULL and not as shown
(C) compiles successfully but execution may result in dangling pointer
(D) compiles successfully but execution may result in memory leak
08. Ans: (A)
09. Let $c_{1}, \ldots, c_{n}$ be scalars, not all zero, such that $\sum_{i=1}^{n} c_{i} a_{i}=0$ where $a_{i}$ are column vectors in $\mathbf{R}^{11}$. Consider the set of linear equations
$\mathrm{Ax}=\mathrm{b}$
Where $A=\left[a_{1}, \ldots, a_{n}\right]$ and $b=\sum_{i=1}^{n} a_{i}$. The set of equations has
(A) a unique solution at $\mathrm{x}=\mathrm{J}_{\mathrm{n}}$ where $\mathrm{J}_{\mathrm{n}}$ denotes a n -dimensional vector of all 1
(B) no solution
(C) infinitely many solutions
(D) finitely many solutions
09. Ans: (C)

Sol: The vectors $a_{1}, a_{2}, \ldots, a_{n}$ are linearly dependant.
For the system $\mathrm{AX}=\mathrm{B}$,
Rank of coefficient matrix $A=$ Rank of augmented matrix (A/B)

$$
=\mathrm{k}(\mathrm{k}<\mathrm{n})
$$

$\therefore$ The system has infinitely many solutions
10. Consider the following functions from positive integers to real numbers:
$10, \sqrt{\mathrm{n}}, \mathrm{n}, \log _{2} \mathrm{n}, \frac{100}{\mathrm{n}}$.
The CORRECT arrangement of the above functions in increasing order of asymptotic complexity is:
(A) $\log _{2} \mathrm{n}, \frac{100}{\mathrm{n}}, 10, \sqrt{\mathrm{n}}, \mathrm{n}$
(B) $\frac{100}{\mathrm{n}}, 10, \log _{2} \mathrm{n}, \sqrt{\mathrm{n}}, \mathrm{n}$
(C) $10, \frac{100}{\mathrm{n}}, \sqrt{\mathrm{n}}, \log _{2} \mathrm{n}, \mathrm{n}$
(D) $\frac{100}{\mathrm{n}}, \log _{2} \mathrm{n}, 10, \sqrt{\mathrm{n}}, \mathrm{n}$
10. Ans: (B)

Sol: As $\mathrm{n} \rightarrow \infty, \frac{100}{\mathrm{n}}<10<\log _{2} \mathrm{n}<\sqrt{\mathrm{n}}<\mathrm{n}$
11. Consider the following context-free grammar over the alphabet $\Sigma=\{\mathrm{a}, \mathrm{b}, \mathrm{c}\}$ with S as the start symbol:
$\mathrm{S} \rightarrow \mathrm{abScT} \mid \mathrm{abcT}$
$\mathrm{T} \rightarrow \mathrm{bT} \mid \mathrm{b}$
Which one of the following represents the language generated by the above grammar?
(A) $\left\{(\mathrm{ab})^{\mathrm{n}}(\mathrm{cb})^{\mathrm{n}} \mid \mathrm{n} \geq 1\right\}$
(B) $\left\{(\mathrm{ab})^{\mathrm{n}} \mathrm{cb}^{\mathrm{m}_{1}} \mathrm{cb}^{\mathrm{m}_{2}} \ldots \mathrm{cb}^{\mathrm{m}_{\mathrm{n}}} \mid \mathrm{n}, \mathrm{m}_{1}, \mathrm{~m}_{2}, \ldots, \mathrm{~m}_{\mathrm{n}} \geq 1\right\}$
(C) $\left\{(\mathrm{ab})^{\mathrm{n}}\left(\mathrm{cb}^{\mathrm{m}}\right)^{\mathrm{n}} \mid \mathrm{m}, \mathrm{n} \geq 1\right\}$
(D) $\left\{(\mathrm{ab})^{\mathrm{n}}\left(\mathrm{cb}^{\mathrm{n}}\right)^{\mathrm{m}} \mid \mathrm{m}, \mathrm{n} \geq 1\right\}$
11. Ans: (C)

Sol: $\mathrm{S} \rightarrow \mathrm{abScT} \mid \mathrm{abcT}$

$$
\begin{aligned}
& \mathrm{T} \rightarrow \mathrm{bT} \mid \mathrm{b} \\
& \mathrm{~S} \rightarrow \mathrm{abScT} \quad \mathrm{~T} \rightarrow \mathrm{bT} \mid \mathrm{b} \\
& \mathrm{~S} \rightarrow \mathrm{abcT} \quad \mathrm{~T} \rightarrow \mathrm{~b}^{+} \\
& \left.\Rightarrow \begin{array}{l}
\mathrm{S} \rightarrow \mathrm{abScT} \\
\mathrm{~S} \rightarrow \mathrm{abcb}^{+}
\end{array}\right\} \mathrm{b}^{+}=\mathrm{b}^{\mathrm{m}} \mid \mathrm{m} \geq 1 \\
& \Rightarrow \mathrm{~S} \rightarrow \mathrm{abScb}^{+} \\
& \\
& \mathrm{S} \rightarrow \mathrm{abcb}^{+} \\
& \Rightarrow \mathrm{S} \rightarrow(\mathrm{ab}) \mathrm{S}\left(\mathrm{cb}^{+}\right) \mid \mathrm{ab} \cdot \mathrm{cb}^{+} \\
& \therefore \mathrm{L}=\left\{(\mathrm{ab})^{\mathrm{n}}\left(\mathrm{cb}^{+}\right)^{\mathrm{n}} \mid \mathrm{n} \geq 1\right\} \\
& \quad \mathrm{L}=\left\{(\mathrm{ab})^{\mathrm{n}}\left(\mathrm{cb}^{\mathrm{m}}\right)^{\mathrm{n}} \mid \mathrm{m}, \mathrm{n} \geq 1\right\}
\end{aligned}
$$

12. Consider the following intermediate program in three address code

$$
\begin{aligned}
& \mathrm{p}=\mathrm{a}-\mathrm{b} \\
& \mathrm{q}=\mathrm{p} * \mathrm{c} \\
& \mathrm{p}=\mathrm{u} * \mathrm{v} \\
& \mathrm{q}=\mathrm{p}+\mathrm{q}
\end{aligned}
$$

Which one of the following corresponds to a static single assignment form of the above code?
(A) $\mathrm{p}_{1}=\mathrm{a}-\mathrm{b}$
$\mathrm{q}_{1}=\mathrm{p}_{1} * \mathrm{c}$
$\mathrm{p}_{1}=\mathrm{u}$ * v
$\mathrm{q}_{1}=\mathrm{p}_{1}+\mathrm{q}_{1}$
(B) $\mathrm{p}_{3}=\mathrm{a}-\mathrm{b}$
$\mathrm{q}_{4}=\mathrm{p}_{3} * \mathrm{c}$
$\mathrm{p}_{4}=\mathrm{u}^{*} \mathrm{v}$

$$
\mathrm{q}_{5}=\mathrm{p}_{4}+\mathrm{q}_{4}
$$

(C)
$\mathrm{p}_{1}=\mathrm{a}-\mathrm{b}$
$\mathrm{q}_{1}=\mathrm{p}_{2} * \mathrm{c}$
$\mathrm{p}_{3}=\mathrm{u} * \mathrm{v}$
$\mathrm{q}_{2}=\mathrm{p}_{4}+\mathrm{q}_{3}$
(D) $\mathrm{p}_{1}=\mathrm{a}-\mathrm{b}$

$$
\begin{aligned}
& \mathrm{q}_{1}=\mathrm{p} * \mathrm{c} \\
& \mathrm{p}_{2}=\mathrm{u} * \mathrm{v} \\
& \mathrm{q}_{2}=\mathrm{p}+\mathrm{q}
\end{aligned}
$$

## 12. Ans: (B)

Sol: All assignments in SSA are to variables with distinct names
$\mathrm{p}_{3}=\mathrm{a}-\mathrm{b}$
$\mathrm{q}_{4}=\mathrm{P}_{3} * \mathrm{c}$
$\mathrm{p}_{4}=\mathrm{u} * \mathrm{v}$
$\mathrm{q}_{5}=\mathrm{P}_{4}+\mathrm{q}_{4}$
13. When two 8-bit numbers $A_{7} \ldots . A_{0}$ and $B_{7} \ldots B_{0}$ in 2 's complement representation (with $A_{0}$ and $B_{0}$ as the least significant bits) are added using a ripple-carry adder, the sum bits obtained are $S_{7} \ldots$ $\mathrm{S}_{0}$ and the carry bits are $\mathrm{C}_{7} \ldots \mathrm{C}_{0}$. An overflow is said to have occurred if
(A) the carry bit $\mathrm{C}_{7}$ is 1
(B) all the carry bits $\left(\mathrm{C}_{7}, \ldots, \mathrm{C}_{0}\right)$ are 1
(C) $\left(A_{7} \cdot B_{7} \cdot \bar{S}_{7}+\bar{A}_{7} \cdot \bar{B}_{7} \cdot S_{7}\right)$ is 1
(D) $\left(A_{0} \cdot B_{0} \cdot \bar{S}_{0}+\bar{A}_{0} \cdot \bar{B}_{0} \cdot S_{0}\right)$ is 1

## 13. Ans: (C)

Sol: $\quad \mathrm{A}_{7} \mathrm{~A}_{6} \mathrm{~A}_{5} \mathrm{~A}_{4} \mathrm{~A}_{3} \mathrm{~A}_{2} \mathrm{~A}_{1} \mathrm{~A}_{0}$
$\mathrm{B}_{7} \mathrm{~B}_{6} \mathrm{~B}_{5} \mathrm{~B}_{4} \mathrm{~B}_{3} \mathrm{~B}_{2} \mathrm{~B}_{1} \mathrm{~B}_{0}$
$\mathrm{C}_{6} \underline{\mathrm{C}_{5}} \underline{\mathrm{C}}_{4} \underline{\mathrm{C}}_{3} \underline{\mathrm{C}_{2}} \underline{\mathrm{C}}_{1} \underline{\mathrm{C}_{0}}$
$\underline{C}_{7} \underline{S_{7}} \underline{S_{6}} \underline{S_{5}} \underline{S}_{4} \underline{S_{3}} \underline{S}_{2} \underline{S_{1}} \underline{\mathrm{~S}_{0}} \underline{0} \rightarrow$ Result

Overflow occurs, when $S_{7}$ is ' 0 ' while adding 2 number of negative data or $S_{7}$ is ' 1 ' while adding 2 number of positive data.

Expression is $\mathrm{A}_{7} \mathrm{~B}_{7} \overline{\mathrm{~S}}_{7}+\overline{\mathrm{A}}_{7} \overline{\mathrm{~B}}_{7} \mathrm{~S}_{7}$
14. A sender $S$ sends a message $m$ to receiver $R$, which is digitally signed by $S$ with its private key. In this scenario, one or more of the following security violations can take place.
(I) S can launch a birthday attack to replace m with a fraudulent message.
(II) A third party attacker can launch a birthday attack to replace $m$ with a fraudulent message.
(III) R can launch a birthday attack to replace m with a fraudulent message.

Which of the following are possible security violations?
(A) (I) and (II) only
(B) (I) only
(C) (II) only
(D) (II) and (III) only
14. Ans: (A)

Sol: A birthday attack is a type of cryptographic attack that exploits the mathematics behind the birthday problem in probability theory. This attack can be used to abuse communication between two or more parties. The attack depends on the higher likelihood of collisions found between random attack attempts and a fixed degree of permutations.

## 1: Sender can launch the attack

Suppose Alice wants to trick Bob into signing a fraudulent contract. Mallory prepares a fair contract m and a fraudulent one $\mathrm{m}^{\prime}$. She then finds a number of positions where m can be changed without changing the meaning, such as inserting commas, empty lines, one versus two spaces after a sentence, replacing synonyms, etc. By combining these changes, she can create a huge number of variations on $m$ which are all fair contracts.

## 2. The third party attacker can also launch the attack

The birthday attack on digital signatures allows a third party to replace one digitally signed message with a different one without altering the signature.
15. Let T be a tree with 10 vertices. The sum of the degree of all the vertices in T is $\qquad$ .
15. Ans: 18

Sol: If T has n vertices, then number of edges in T is $\mathrm{n}-1$
By sum of degrees of vertices theorem

$$
\begin{aligned}
\sum_{\mathrm{i}=1}^{10} \operatorname{deg}\left(\mathrm{~V}_{\mathrm{i}}\right) & =2|\mathrm{E}| \\
& =2(9)=18
\end{aligned}
$$

16. Consider a TCP client and a TCP sever running on two different machines. After completing data transfer, the TCP client calls close to terminate the connection and a FIN segment is sent to the TCP server. Server-side TCP responds by sending an ACK, which is received by the client-side TCP. As per the TCP connection state diagram (RFC 793), in which state does the client-side TCP connection wait for the FIN from the server-side TCP?
(A) LAST-ACK
(B) TIME-WAIT
(C) FIN-WAIT-1
(D) FIN-WAIT-2
17. Ans: (D)
18. Consider the Karnaugh map given below, where X represents "don't care" and blank represents 0 .

| $\frac{b a}{d a}$ | 00 | 01 | 11 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| 00 |  | x | X |  |
| 01 | 1 |  |  | X |
| 11 | 1 |  |  | 1 |
| 10 |  | X | x |  |

Assume for all inputs ( $\mathrm{a}, \mathrm{b}, \mathrm{c}, \mathrm{d}$ ), the respective complements ( $\overline{\mathrm{a}}, \overline{\mathrm{b}}, \overline{\mathrm{c}}, \overline{\mathrm{d}}$ ) are also available. The above logic is implemented using 2 -input NOR gates only. The minimum number of gates required is $\qquad$ .

## 17. Ans: 1

Sol: $\mathrm{c} \overline{\mathrm{a}}=\overline{\overline{\mathrm{ca}}}=\overline{\overline{\mathrm{c}}+\mathrm{a}}$

Hence, only one NOR gate is sufficient.
18. Let $X$ be a Gaussian random variable with mean 0 and variance $\sigma^{2}$. Let $Y=\max (X, 0)$ where $\max (a, b)$ is the maximum of $a$ and $b$. The median of $Y$ is $\qquad$ .
18. Ans: 0

Sol: Here, half of the values of Y are to the left of the mean $\mathrm{X}=0$ and the remaining half of the values of Y lies to the right of the mean $\mathrm{X}=0$.
$\therefore$ The median of $\mathrm{Y}=0$
19. Consider the following table:

| Algorithms | Design Paradigms |
| :--- | :--- |
| (P) Kruskal | (i) Divide and Conquer |
| (Q) Quicksort | (ii) Greedy |
| (R) Floyd-Warshall | (iii) Dynamic Programing |

Match the algorithms to the design paradigms they are based on.
(A) (P) $\leftrightarrow$ (ii),
$(\mathrm{Q}) \leftrightarrow(\mathrm{iii})$,
$(\mathrm{R}) \leftrightarrow(\mathrm{i})$
(B) $(\mathrm{P}) \leftrightarrow(\mathrm{iii}), \quad(\mathrm{Q}) \leftrightarrow(\mathrm{i})$,
$(\mathrm{R}) \leftrightarrow$ (ii)
(C) $(\mathrm{P}) \leftrightarrow$ (ii),
$(\mathrm{Q}) \leftrightarrow(\mathrm{i})$,
(R) $\leftrightarrow$ (iii)
(D) $(\mathrm{P}) \leftrightarrow(\mathrm{i})$,
$(\mathrm{Q}) \leftrightarrow(\mathrm{ii})$,
(R) $\leftrightarrow$ (iii)
19. Ans: (C)

## SHORT TERM BATCHES FOR GATE+PSUs -2018 STARTING FROM

## HYDERABAD

29 ${ }^{\text {th }}$ APRIL 2017 onwards

## GENERAL STUDIES BATCHES FOR ESE-2018 STARTING FROM <br> HYDERABAD \& DELHI

$1^{\text {st }}$ week of July 2017
20. Consider a two-level cache hierarchy with $L_{1}$ and $L_{2}$ caches. An application incurs 1.4 memory accesses per instruction on average. For this application, the miss rare of $L_{1}$ cache is 0.1 ; the $L_{2}$ cache experiences, on average, 7 misses per 1000 instructions. The miss rate of $\mathrm{L}_{2}$ expressed correct to two decimal places is $\qquad$ .
20. Ans: 0.05

Sol: On Average, 1.4 memory accesses are required for one instruction execution on average. So, for 1000 instructions 1400 Accesses are needed.

Number of misses occurred in cache $L_{2}$ for 1000 instruction $=7 / 1400=0.005$
$\therefore$ Missrate of $\mathrm{L}_{2}$ cache $=\frac{\text { misses in } \mathrm{L}_{2} \text { cache }}{\text { miss rate in } \mathrm{L}_{1} \text { cache }}=\frac{0.005}{0.1}=0.05$
21. Consider the C code fragment given below.
typedef struct node
$\{\quad$ int data;
node * next;
\} node;
void join (node * m, node * n )
\{
node * $\mathrm{p}=\mathrm{n}$;
while $(\mathrm{p} \rightarrow$ next $!=$ NULL $)$
\{

$$
\mathrm{p}=\mathrm{p} \rightarrow \mathrm{next} ;
$$

\}
$\mathrm{p} \rightarrow$ next $=\mathrm{m} ;$
\}
Assuming that $m$ and $n$ point to valid NULL-terminated linked lists, invocation of join will
(A) append list m to the end of list n for all inputs.
(B) either cause a null pointer dereference or append list $m$ to the end of list $n$.
(C) cause a null pointer dereference for all inputs.
(D) append list n to the end of list m for all inputs.
21. Ans: (A)

Sol: While loop will be terminated after reaching last node of list ' $n$ ' and last node next pointer pointing to the first node of list $m$.
22. Consider the following grammar:

$$
\begin{aligned}
& \mathrm{P} \rightarrow \mathrm{xQRS} \\
& \mathrm{Q} \rightarrow \mathrm{yz} \mid \mathrm{z} \\
& \mathrm{R} \rightarrow \mathrm{w} \mid \varepsilon \\
& \mathrm{S} \rightarrow \mathrm{y}
\end{aligned}
$$

What is FOLLOW(Q)?
(A) $\{\mathrm{R}\}$
(B) $\{\mathrm{w}\}$
(C) $\{\mathrm{w}, \mathrm{y}\}$
(D) $\{\mathrm{w}, \$\}$
22. Ans: (C)

Sol: FOLLOW $(\mathrm{Q})=$ First $(\mathrm{R})-\{\varepsilon\} \cup$ First $(\mathrm{S})$

$$
=\{\mathrm{w}, \varepsilon\}-\{\varepsilon\} \cup\{\mathrm{y}\}=\{\mathrm{w}, \mathrm{y}\}
$$

23. Consider the first-order logic sentence $\mathrm{F}: \forall \mathrm{x}(\exists \mathrm{yR}(\mathrm{x}, \mathrm{y}))$. Assuming non-empty logical domain, which of the sentences below are implied by F?
I. $\exists \mathrm{y}(\exists \mathrm{xR}(\mathrm{x}, \mathrm{y}))$
II. $\exists \mathrm{y}(\forall \mathrm{xR}(\mathrm{x}, \mathrm{y}))$
III. $\forall \mathrm{y}(\exists \mathrm{xR}(\mathrm{x}, \mathrm{y}))$
IV. $\neg \exists \mathrm{x}(\forall \mathrm{y} \neg \mathrm{R}(\mathrm{x}, \mathrm{y}))$
(A) IV only
(B) I and IV only
(C) II only
(D) II and III only

## 23. Ans: (B)

Sol: We have $\forall_{x}\left(\exists_{y} R(x, y)\right) \Rightarrow \exists_{y}\left(\exists_{x} R(x, y)\right)$
And $\forall_{x}\left(\exists_{y} R(x, y)\right) \Leftrightarrow \sim \exists_{x}\left(\forall_{x} \sim R(x, y)\right)$
$\therefore$ The formulas I and IV are implied by F.
24. Consider the language $L$ given by the regular expression $(a+b)^{*} b(a+b)$ over the alphabet $\{a, b\}$. The smallest number of states needed in a deterministic finite-state automaton (DFA) accepting L is $\qquad$ .
24. Ans: 4

Sol: $\mathrm{r}=(\mathrm{a}+\mathrm{b})^{*} \mathrm{~b}(\mathrm{a}+\mathrm{b})$
$\mathrm{L}=(\mathrm{a}+\mathrm{b})^{*}(\mathrm{ba}+\mathrm{bb})$

L contains strings with length atleast 2 but ends in ba or bb
All the states of DFA are distinct and all the states are reachable
$\therefore$ Number of states in MDFA that Accepts $\mathrm{L}=4$
25. Consider a database that has the relation schema EMP (EmpID, EmpName, and DeptName). An instance of the schema EMP and a SQL query on it are given below.

| EMP |  |  |
| :---: | :---: | :---: |
| EmpID | EmpName | DeptName |
| 1 | XYA | AA |
| 2 | XYB | AA |
| 3 | XYC | AA |
| 4 | XYD | AA |
| 5 | XYE | AB |
| 6 | XYF | AB |
| 7 | XYG | AB |
| 8 | XYH | AC |
| 9 | XYI | AC |
| 10 | XYJ | AC |
| 11 | XYK | AD |
| 12 | XYL | AD |
| 13 | XYM | AE |

SELECT AVG(EC.Num)
FROM EC
WHERE (DeptName, Num) IN
(SELECT DeptName, COUNT(EmpId) AS
EC(DeptName,Num)
FROM EMP
GROUP BY DeptName

The output of executing the SQL query is $\qquad$ .

## 25. Ans: 2.6

Sol: Result of inner query

| Dept name | Number |
| :---: | :---: |
| AA | 4 |
| AB | 3 |
| AC | 3 |
| AD | 2 |
| AE | 1 |

Result of outer query $=\frac{13}{5}=2.6$
26. Consider a RISC machine where each instruction is exactly 4 bytes long. Conditional and unconditional branch instructions use PC-relative addressing mode with Offset specified in bytes to the target location of the branch instruction. Further the Offset is always with respect to the address of the next instruction in the program sequence. Consider the following instruction sequence

If the target of the branch instruction is $i$, then the decimal value of the offset is $\qquad$ .

## 26. Ans: $\mathbf{- 1 6}$

Sol: While executing the $\mathrm{i}+3$ instruction, the PC content will be the starting address of the $\mathrm{i}+4$. If the target of the branch instruction is ' i ' then processor takes 4 instructions addresses back (Backword jump)

Hence the displacement value is $-4 * 4=-16$, because each instruction opcode size is 4 bytes.
27. Recall that Belady's anomaly is that the page-fault rate may increase as the number of allocated frames increases. Now, consider the following statements:

S1: Random page replacement algorithm (where a page chosen at random is replaced) suffers from Belady's anomaly

S2: LRU page replacement algorithm suffers from Belady's anomaly
Which of the following is CORRECT?
(A) S 1 is true, S 2 is true
(B) S 1 is true, S 2 is false
(C) S 1 is false, S 2 is true
(D) S 1 is false, S 2 is false
27. Ans: (B)

Sol: Belady's anomaly occurs in FIFO page replacement policy. If random page replacement replaces the page same as FIFO then Belady's anomaly may occur.

In LRU policy, it does not occur.
28. In a RSA cryptosystem, a participant $A$ uses two prime numbers $p=13$ and $q=17$ to generate her public and private keys. If the public key of A is 35 , then the private key of A is $\qquad$ .
28. Ans: 11

Sol: $p=13, q=17$
$\mathrm{K}_{\mathrm{u}}=\{\mathrm{e}, \mathrm{u}\}=\{35\}$
$\mathrm{K}_{\mathrm{r}}=\mathrm{d}=$ ?
RSA steps

1. $\mathrm{p}=13 \mathrm{q}=17$
2. $n=13 \times 17$

$$
\begin{aligned}
\phi(\mathrm{n}) & =(\mathrm{p}-1)(\mathrm{q}-1)=12 \times 16=192 \\
\mathrm{~d} & =? \\
\mathrm{e} & =35
\end{aligned}
$$

So $(\mathrm{e} \times \mathrm{d}) \bmod \phi(\mathrm{n})=1$
$(35 \times \mathrm{d}) \bmod 192=1$
$d=11$
29. The number of integers between 1 and 500 (both inclusive) that are divisible by 3 or 5 or 7 is $\qquad$ -.
29. Ans: 271

Sol: Number of integers divisible by 3 or 5 or 7

$$
\begin{aligned}
& =\mathrm{n}(3 \vee 5 \vee 7)=\mathrm{n}(3)+\mathrm{n}(5)+\mathrm{n}(7)-\mathrm{n}(3 \wedge 5)-\mathrm{n}(5 \wedge 7)-\mathrm{n}(3 \wedge 7)+\mathrm{n}(3 \wedge 5 \wedge 7) \\
& =\left\lfloor\frac{500}{3}\right\rfloor+\left\lfloor\frac{500}{5}\right\rfloor+\left\lfloor\frac{500}{7}\right\rfloor-\left\lfloor\frac{500}{15}\right\rfloor-\left\lfloor\frac{500}{35}\right\rfloor-\left\lfloor\frac{500}{21}\right\rfloor+\left\lfloor\frac{500}{105}\right\rfloor \\
& =166+100+71-33-14-23+4 \\
& =271
\end{aligned}
$$

30. The values of parameters for the Stop-and-Wait ARQ protocol are as given below:

Bit rate of the transmission channel $=1 \mathrm{Mbps}$.
Propagation delay from sender to receiver $=0.75 \mathrm{~ms}$.
Time to process a frame $=0.25 \mathrm{~ms}$.
Number of bytes in the information frame $=1980$.
Number of bytes in the acknowledge frame $=20$.
Number of overhead bytes in the information frame $=20$.
Assume that there are no transmission errors. Then, the transmission efficiency (expressed in percentage) of the Stop-and-Wait ARQ protocol for the above parameters is $\qquad$ (correct to 2 decimal places).
30. Ans: 89.33

Sol: $\mathrm{B}=1 \mathrm{Mbps}$
$\mathrm{T}_{\mathrm{p}}=0.75 \mathrm{~ms}$
$\mathrm{T}_{\text {proc }}=0.25 \mathrm{~ms}$
Payload $=1980$ B
Ack $=20 \mathrm{~B}$
$\mathrm{OH}=20 \mathrm{~B}$

$$
\mathrm{L}=\text { Payload }+\mathrm{OH}=1980+20=2000 \text { Bytes }
$$

$\mathrm{T}_{\mathrm{x}}=\frac{\mathrm{L}}{\mathrm{B}}=\frac{2000 \times 8}{1 \times 10^{6}}=16 \mathrm{~ms}$

$$
\begin{aligned}
\mathrm{T}_{\mathrm{ax}} & =\frac{20 \times 8}{1 \times 10^{6}} \\
& =160 \mu \mathrm{sec} \\
& =0.16 \mathrm{msec}
\end{aligned}
$$

$$
\begin{aligned}
& \text { Total time }=\mathrm{T}_{\mathrm{x}}+\mathrm{T}_{\mathrm{p}}+\mathrm{T}_{\text {proc }}+\mathrm{T}_{\mathrm{ax}}+\mathrm{T}_{\mathrm{p}}+\mathrm{T}_{\text {aproc }} \\
&=16 \mathrm{~ms}+0.75 \mathrm{~ms}+0.25 \mathrm{~ms}+0.16 \mathrm{~ms}+0.75 \mathrm{~ms} \\
&=17.91 \mathrm{~ms} \\
& \eta=\frac{\mathrm{T}_{\mathrm{x}}}{\text { Total Time }} \\
&=\frac{16}{17.91}=89.33 \%
\end{aligned}
$$

31. If G is a grammar with productions
$\mathrm{S} \rightarrow \mathrm{SaS}|\mathrm{aSb}| \mathrm{bSa}|\mathrm{SS}| \varepsilon$
Where S is the start variable, then which one of the following strings is not generated by G ?
(A) abab
(B) aaab
(C) abbaa
(D) babba
32. Ans: (D)
(A) $\mathrm{S} \rightarrow \mathrm{aSb}$
$\rightarrow$ abSab
$\rightarrow$ abab
(B) $\mathrm{S} \rightarrow \mathrm{aSb}$
$\rightarrow \mathrm{aSaSb}$
(C) $\mathrm{S} \rightarrow \mathrm{SaS}$
$\rightarrow \mathrm{aSaSaSb}$
$\rightarrow \mathrm{aS}$
$\rightarrow$ aaab ${ }^{\text {ab }}$ abbSaa
$\rightarrow$ abbaa
33. Let $A$ be an array of 31 numbers consisting of a sequence of 0 's followed by a sequence of 1 's. The problem is to find the smallest index $i$ such that $A[i]$ is 1 by probing the minimum number of locations in A. The worst case number of probes performed by an optimal algorithm is $\qquad$ .
34. Ans: 5

Sol: Since $n=31=2^{5}-1$
By using optimal searching algorithm it takes in worst case ' 5 ' comparison.
33. Consider the following C program.

```
#include <stdio.h>
#include <string.h>
void printlength (char *s, char *t)
{ unsigned int c = 0;
    int len = ((strlen (s) - strlen (t))>c) ? strlen (s) : strlen (t);
    printf("%d\n", len);
}
void main ()
{ char *x = "abc";
    char *y = "defgh";
    printlength (x,y);
}
```

Recall that strlen is defined in string.h as returning a value of type size_t, which is an unsigned int. The output of the program is $\qquad$ .
33. Ans: 3

Sol: $\operatorname{Strlen}(\mathrm{s})$ - $\operatorname{Strlen}(\mathrm{t})$ will return an unsigned integer which is greater than ' c ' so 'len' variable holds value ' 3 '. So output is 3 .
34. Let $\mathrm{G}=(\mathrm{V}, \mathrm{E})$ be any connected undirected edge-weighted graph. The weights of the edges in E are positive and distinct. Consider the following statements:
(I) Minimum Spanning Tree of $G$ is always unique.
(II) Shortest path between any two vertices of G is always unique.

Which of the above statements is/are necessarily true?
(A) (I) only
(B) (II) only
(C) both (I) and (II)
(D) neither (I) nor (II)
34. Ans: (A)

Sol: If the Graph contain distinct weight edges then MST is always unique. But shortest path between any two vertices of $G$ is need not be unique.
35. A computer network uses polynomials over $\mathrm{GF}(2)$ for error checking with 8 bits as information bits and uses $\mathrm{x}^{3}+\mathrm{x}+1$ as the generator polynomial to generate the check bits. In this network, the message 01011011 is transmitted as
(A) 01011011010
(B) 01011011011
(C) 01011011101
(D) 01011011100
35. Ans: (C)

## Sol:

1011) $01011011000(01000011$

| 1011 |
| :---: |
| 1100 <br> 1011 |
|  |
| $\underbrace{10110}$ |
| 1011 |

## CRC

36. Consider the expression $(a-1)^{*}(((\mathrm{~b}+\mathrm{c}) / 3)+\mathrm{d})$. Let X be the minimum number of registers required by an optimal code generation (without any register spill) algorithm for a load/store architecture, in which (i) only load and store instructions can have memory operands and (ii) arithmetic instructions can have only register or immediate operands. The value of X is $\qquad$ .
37. Ans: 2

Sol: Expression is
$(a-1) \times(((b+c) / 3)+d)$
load $\mathrm{R}_{1}, \mathrm{~b}\left(\mathrm{R}_{1} \leftarrow \mathrm{~b}\right)$
load $\mathrm{R}_{2}, \mathrm{c}\left(\mathrm{R}_{2} \leftarrow \mathrm{c}\right)$
$\operatorname{ADD} \mathrm{R}_{1}, \mathrm{R}_{2}\left(\mathrm{R}_{1} \leftarrow \mathrm{~b}+\mathrm{c}\right)$
$\operatorname{DIV}_{1},\left(3 \mathrm{R} 1 \leftarrow\left(\frac{\mathrm{~b}+\mathrm{c}}{3}\right)\right)$
load $\mathrm{R}_{2}, \mathrm{~d}\left(\mathrm{R}_{2} \leftarrow \mathrm{~d}\right)$
$\operatorname{ADD~}_{1}, \mathrm{R}_{2}\left(\mathrm{R}_{1} \leftarrow\left(\frac{\mathrm{~b}+\mathrm{c}}{3}+\mathrm{d}\right)\right)$
load $\mathrm{R}_{2}, \mathrm{a}\left(\mathrm{R}_{2} \leftarrow \mathrm{a}\right)$
$\operatorname{Dec} \mathrm{R}_{2}\left(\mathrm{R}_{2} \leftarrow \mathrm{a}-1\right)$
MUL $\mathrm{R}_{2}, \mathrm{R}_{1}$ (Final Result is available in $\mathrm{R}_{2}$ )
STORE R 2 on memory
$\rightarrow$ only $\mathrm{R}_{1}$ and $\mathrm{R}_{2}$ Registers are sufficient to evaluate the expression.
37. Consider the following grammar:
stmt $\rightarrow$ if expr then expr else expr; stmt $\mid \mathrm{o}$
expr $\rightarrow$ term relop term | term
term $\rightarrow$ id $\mid$ number
$\mathrm{id} \rightarrow \mathrm{a}|\mathrm{b}| \mathrm{c}$
number $\rightarrow$ [0-9]
where relop is a relational operator (e.g., <,>, ...), o refers to the empty statement, and if, then, else are terminals.

Consider a program P following the above grammar containing ten if terminals. The number of control flow paths in P is $\qquad$ For example, the program
if $\mathrm{e}_{1}$ then $\mathrm{e}_{2}$ else $\mathrm{e}_{3}$
has 2 control flow paths, $\mathrm{e}_{1} \rightarrow \mathrm{e}_{2}$ and $\mathrm{e}_{1} \rightarrow \mathrm{e}_{3}$.
37. Ans: 20

Sol: As program containing 10 if terminals, all those can be determined with the productions stmt $\rightarrow$ if expr then expr else expr, stmt and each of this production contain 2 control flow paths and the program contain total of 20 control paths.
38. Let $A$ be $n \times n$ real valued square symmetric matrix of rank 2 with $\sum_{i=1}^{n} \sum_{j=1}^{n} A_{i j}^{2}=50$. Consider the following statements.
(I) One eigenvalue must be in $[-5,5]$
(II) The eigenvalue with the largest magnitude must be strictly greater than 5

Which of the above statements about engenvalues of A is/are necessarily CORRECT?
(A) Both (I) and (II)
(B) (I) only
(C) (II) only
(D) Neither (I) nor (II)
38. Ans: (B)

Sol: Rank of $\mathrm{A}_{\mathrm{n} \times \mathrm{n}}=2$
$\Rightarrow \mathrm{n}-2$ eigen values are zero. Let $\lambda_{1}, \lambda_{2}, 0,0, \ldots, 0$ be the eigen values.
Given that $\sum_{\mathrm{i}=1}^{\mathrm{n}} \sum_{\mathrm{j}=1}^{\mathrm{n}} \mathrm{A}_{\mathrm{ij}}^{2}=50$
We know that $\sum_{i=1}^{n} \sum_{j=1}^{n} A_{i j}^{2}=$ Trace of $\left(\mathrm{A} \mathrm{A}^{T}\right)=$ Trace of $\mathrm{A}^{2} \quad$ (since A is symmetric)

$$
\begin{equation*}
=\lambda_{1}^{2}+\lambda_{2}^{2}+0+\ldots+0 \tag{2}
\end{equation*}
$$

From (1) and (2),
$\lambda_{1}^{2}+\lambda_{2}^{2}=50$
$\Rightarrow$ Atleast one eigen value lies in $[-5,5]$
$\therefore$ Option (I) is true.
Option (II) need not be true, because the eigen values can be $\lambda_{1}= \pm 5, \lambda_{2}= \pm 5$
39. The value of $\lim _{x \rightarrow 1} \frac{x^{7}-2 x^{5}+1}{x^{3}-3 x^{2}+2}$
(A) is 0
(B) is -1
(C) is 1
(D) does not exit
39. Ans: (C)

Sol: $\underset{x \rightarrow 1}{\operatorname{Lt}}\left(\frac{x^{7}-2 x^{5}+1}{x^{3}-3 x^{2}+2}\right)$

$$
\begin{aligned}
& \operatorname{Lt}_{x \rightarrow 1}\left(\frac{7 x^{6}-10 x^{4}}{3 x^{2}-6 x}\right) \\
& \quad=\frac{7-10}{3-6}=+1
\end{aligned}
$$

40. A cache memory unit with capacity of N words and block size of B words is to be designed. If it is designed as direct mapped cache, the length of the TAG field is 10 bits. If the cache unit is now designed as a 16-way set-associative cache, the length of the TAG field is $\qquad$ bits.
41. Ans: 14

Sol: Type of mapping is direct map; for this direct map, 10 bits are required in it's Tag. It is updated to 16 way set Associative map then new tag field size $=10+\log _{2} 16=14$ bits, because for k way set associative map design, $\log _{2} \mathrm{k}$ bits are additionally required to the number of bits in tag field for Direct map design.
41. Consider the context-free grammar over the alphabet $\{\mathrm{a}, \mathrm{b}, \mathrm{c}\}$ given below. S and T are nonterminals.

$$
\begin{aligned}
& \mathrm{G}_{1}: \mathrm{S} \rightarrow \mathrm{aSb}|\mathrm{~T}, \mathrm{~T} \rightarrow \mathrm{cT}| \varepsilon \\
& \mathrm{G}_{2}: \mathrm{S} \rightarrow \mathrm{bSa}|\mathrm{~T}, \mathrm{~T} \rightarrow \mathrm{cT}| \varepsilon
\end{aligned}
$$

The language $\mathrm{L}\left(\mathrm{G}_{1}\right) \cap \mathrm{L}\left(\mathrm{G}_{2}\right)$ is
(A) Finite
(B) Not finite but regular
(C) Context-Free but not regular
(D) Recursive but not context-free
41. Ans: (B)

Sol: $\mathrm{G}_{1}: \mathrm{S} \rightarrow \mathrm{aSb}|\mathrm{T}, \mathrm{T} \rightarrow \mathrm{cT}| \varepsilon$
$\Rightarrow \mathrm{L}\left(\mathrm{G}_{1}\right)=\left\{\mathrm{a}^{\mathrm{m}} \mathrm{c}^{\mathrm{n}} \mathrm{b}^{\mathrm{m}} \mid \mathrm{m}, \mathrm{n} \geq, 0\right\}$
$\mathrm{G}_{2}: \mathrm{S} \rightarrow \mathrm{bSa}|\mathrm{T}, \mathrm{T} \rightarrow \mathrm{cT}| \varepsilon$
$\mathrm{L}\left(\mathrm{G}_{2}\right)=\left\{\mathrm{b}^{\mathrm{m}} \mathrm{c}^{\mathrm{n}} \mathrm{a}^{\mathrm{m}} \mid \mathrm{m}, \mathrm{n} \geq 0\right\}$
Both $L\left(\mathrm{G}_{1}\right)$ and $\mathrm{L}\left(\mathrm{G}_{2}\right)$ are CFL.
$L\left(G_{1}\right) \cap L\left(G_{2}\right)=c^{*}$
$\therefore$ regular but not finite
42. The output of executing the following C program is $\qquad$ .

```
#include <stdio.h>
int total (int v)
{ static int count = 0;
    while (v)
    { count + = v&1;
        v >> = 1;
    }
    return count;
}
void main ()
{ static int x=0;
    int i = 5;
    for (; i>0; i--)
    { }\quad\textrm{x}=\textrm{x}+\operatorname{total}(\textrm{i})
    }
    printf("%d\n", x);
}
```

42. Ans: 23
43. Let $u$ and $v$ be two vectors in $R^{2}$ whose Euclidean norms satisfy $\|u\|=2\|v\|$. What is the value of $\alpha$ such that $\mathrm{w}=\mathrm{u}+\alpha \mathrm{v}$ bisects the angle between $u$ and $v$ ?
(A) 2
(B) $1 / 2$
(C) 1
(D) $-1 / 2$
44. Ans: (A)

Sol: If we find two vectors with equal magnitude in the direction of given vectors, then their sum will bisect the angle between them.
$\therefore$ In the vector $\mathrm{w}=\mathrm{u}+\alpha \mathrm{v}$
$\therefore$ We have to choose $\alpha=2$

## HEARTY CONGRATULATIONS TO OUR

44. Consider the following two functions.

```
void fun1 (int n) void fun2 (int n)
{
    if (n==0) return;
    printf ("%d", n);
    fun2 (n-2);
    printf("%d", n);
}
```

The output printed when funl (5) is called is
(A) 53423122233445
(B) 53423120112233
(C) 53423122132435
(D) 53423120213243

## 44. Ans: (A)

Sol:

45. Let A and B be finite alphabets and let \# be a symbol outside both A and B. Let f be a total function from $A^{*}$ to $B^{*}$. We say $f$ is computable if there exists a Turing machine $M$ which given an input x in $\mathrm{A}^{*}$, always halts with $\mathrm{f}(\mathrm{x})$ on its tape. Let $\mathrm{L}_{\mathrm{f}}$ denote the language $\left\{\mathrm{x} \# \mathrm{f}(\mathrm{x}) \mid \mathrm{x} \in \mathrm{A}^{*}\right\}$.
Which of the following statements is true:
(A) $f$ is computable if and only if $L_{f}$ is recursive
(B) $f$ is computable if and only if $L_{f}$ is recursively enumerable
(C) If f is computable then $\mathrm{L}_{\mathrm{f}}$ is recursive, but not conversely
(D) If $f$ is computable then $L_{f}$ is recursively enumerable, but not conversely
45. Ans: (A)
46. Consider the C function foo and bar given below: int foo (int val)
int $\mathrm{x}=0$;
while $($ val $>0)$
\{
$x=x+$ foo $(\mathrm{val}--) ;$
\}
return val;
\}
int bar (int val)
\{
int $\mathrm{x}=0$;
while $($ val $>0)$
\{
$x=x+\operatorname{bar}(\operatorname{val}-1) ;$
\}
return val;
\}

Invocations of foo (3) and bar (3) will result in:
(A) Return of 6 and 6 respectively
(B) Infinite loop and abnormal termination respectively
(C) Abnormal termination and infinite loop respectively
(D) Both terminating abnormally
46. Ans: (D)

Sol: Both functions are terminated abnormally.
47. Consider the following languages over the alphabet $\Sigma=\{\mathrm{a}, \mathrm{b}, \mathrm{c}\}$.

Let $L_{1}=\left\{a^{n} b^{n} c^{m} \mid m, n \geq 0\right\}$ and $L_{2}=\left\{a^{m} b^{n} c^{n} \mid m, n \geq 0\right\}$.
Which of the following are context-free languages?
I. $\mathrm{L}_{1} \cup \mathrm{~L}_{2}$
II. $\mathrm{L}_{1} \cap \mathrm{~L}_{2}$
(A) I only
(B) II only
(C) I and II
(D) Neither I nor II
47. Ans: (A)

Sol: $\mathrm{L}_{1}=\left\{\mathrm{a}^{\mathrm{n}} \mathrm{b}^{\mathrm{n}} \mathrm{c}^{\mathrm{m}} \mid \mathrm{m}, \mathrm{n} \geq 0\right\}-\mathrm{CFL}$
$\mathrm{L}_{2}=\left\{\mathrm{a}^{\mathrm{m}} \mathrm{b}^{\mathrm{n}} \mathrm{c}^{\mathrm{n}} \mid \mathrm{m}, \mathrm{n} \geq 0\right\}-\mathrm{CFL}$
Both $\mathrm{L}_{1}, \mathrm{~L}_{2}$ are CFL.
From the closure property union of two CFL is CFL but intersection of two CFL need not be CFL
$\therefore \mathrm{L}_{1} \cup \mathrm{~L}_{2}$ is CFL
$\mathrm{L}_{1} \cap \mathrm{~L}_{2}$ is not CFL.
48. Consider a 2-way set associative cache with 256 blocks and uses LRU replacement. Initially the cache is empty. Conflict misses are those misses which occur due to contention of multiple blocks for the same cache set. Compulsory misses occur due to first time access to the block. The following sequence of accesses to memory blocks
( $0,128,256,128,0,128,256,128,1,129,257,129,1,129,257,129$ )
is repeated 10 times. The number of conflict misses experienced by the cache is $\qquad$ .

## 48. Ans: 78

Sol: Associativity = 2, Number of cache blocks $=256$
Number of sets in cache memory $=128\left(\mathrm{~S}_{0}\right.$ to $\left.\mathrm{S}_{127}\right)$
Mapping expression is K Mod 128

Block Request order is
$0,128,256,128,0,128,256,128,1,129,257,129,1,129,257,129$.

Only 2 sets are accessed, known as $\mathrm{S}_{0}$ and $\mathrm{S}_{1}$

| Set 0 | $1^{\text {st }}$ time Reference <br> CFM H CFM H CFM H <br> -8, 128, 256, 128, 0, 128, 256, 128 <br> No. of CFMS $=3$ | $2^{\text {nd }}$ time Reference <br> CFM H CFM H CFM H CFM H $\boldsymbol{\theta}, 128, \mathbf{2 5 6}, 128, \boldsymbol{\theta}, 128,256,128$ <br> No. of $\mathrm{CFMS}=4$ |
| :---: | :---: | :---: |
| Set 1 | $1^{\text {st }}$ time Reference <br> CFM H CFM H CFM H $\boldsymbol{X}, 129, \mathbf{2 5 7}, 129, \boldsymbol{X}, 129, \mathbf{2 5 7}, 129$ <br> No. of CFMS $=3$ | $2^{\text {nd }}$ time Reference <br> CFM CFM H CFM H CFM H <br> $\boldsymbol{X}, 129,257,129, \boldsymbol{X}, 129,257,129$ <br> No. of CFMS $=4$ |

CFM = conflict miss, $\mathrm{H}=$ Hit
Total no. of conflict misses first time $=6$
$2^{\text {nd }}$ time onwards $=8$ each time
If it is Repeated ' 10 ' times, total no. of conflict misses occurred $=6+8 \times 9=78$
49. A multithreaded program P executes with x number of threads and uses y number of locks for ensuring mutual exclusion while operating on shared memory locations. All locks in the program are non-reentrant, i.e., if a thread holds a lock $l$, then it cannot re-acquire lock $l$ without releasing it. If a thread is unable to acquire a lock, it blocks until the lock becomes available. The minimum value of $x$ and the minimum value of $y$ together for which execution of $P$ can result in a deadlock are:
(A) $\mathrm{x}=1, \mathrm{y}=2$
(B) $x=2, y=1$
(C) $x=2, y=2$
(D) $x=1, y=1$
49. Ans: (D)

Sol: Process can get blocked if it tries to acquire the Lock in immediate Succession.
However if the underlying platform does not allow the process to activate the acquire lock procedure/system call after Locking earlier, then the correct option would be (C).
50. Consider a combination of T and D flip-flops connected as shown below. The output of the D flipflop is connected to the input of the T flip-flop and the output of the T flip-flop is connected to the input of the D flip-flop.

Initially, both $\mathrm{Q}_{0}$ and $\mathrm{Q}_{1}$ are set to 1 (before the $1^{\text {st }}$ clock cycle). The outputs
(A) $\mathrm{Q}_{1} \mathrm{Q}_{0}$ after the $3^{\text {rd }}$ cycle are 11 and after the $4^{\text {th }}$ cycle are 00 respectively
(B) $\mathrm{Q}_{1} \mathrm{Q}_{0}$ after the $3^{\text {rd }}$ cycle are 11 and after the $4^{\text {th }}$ cycle are 01 respectively
(C) $\mathrm{Q}_{1} \mathrm{Q}_{0}$ after the $3^{\text {rd }}$ cycle are 00 and after the $4^{\text {th }}$ cycle are 11 respectively
(D) $Q_{1} Q_{0}$ after the $3^{\text {rd }}$ cycle are 01 and after the $4^{\text {th }}$ cycle are 01 respectively
50. Ans: (B)

Sol:

| Input |  |  | Output |  |
| :---: | :---: | :---: | :---: | :---: |
| $\mathrm{T}_{1}$ | $\mathrm{D}_{0}$ | Clk | $\mathrm{Q}_{1}$ | $\mathrm{Q}_{0}$ |
|  |  |  |  |  |
| Initial | Values |  | 1 | 1 |
| 1 | 1 | $\uparrow$ | 0 | 1 | $1^{\text {st }}$ clock

$$
\begin{aligned}
\mathrm{T}_{1} & =\mathrm{Q}_{0} \\
\mathrm{D}_{0} & =\mathrm{Q}_{1}
\end{aligned}
$$

51. Let $\mathrm{p}, \mathrm{q}$, and r be propositions and the expression $(\mathrm{p} \rightarrow \mathrm{q}) \rightarrow \mathrm{r}$ be a contradiction. Then, the expression $(\mathrm{r} \rightarrow \mathrm{p}) \rightarrow \mathrm{q}$ is
(A) a tautology
(B) a contradiction
(C) always TRUE when p is FALSE
(D) always TRUE when $q$ is TRUE
52. Ans: (D)

Sol: $(A)$ If $(p \rightarrow q) \rightarrow r$ is false, then $(p \rightarrow q)$ is true and $r$ is false.
The possible cases are
(i) $p$ is true, $q$ is true, $r$ is false
(ii) p is false, q is true, r is false
(iii) $p$ is false, $q$ is false, $r$ is false

For case (iii), $(\mathrm{r} \rightarrow \mathrm{p}) \rightarrow \mathrm{q}$ is false
$\therefore$ It is not a tautology
(B) For case (i) and case (ii), $(r \rightarrow p) \rightarrow q$ is true.
$\therefore$ It is not a contradiction
(C) For case (iii), $p$ is false and $(r \rightarrow p) \rightarrow q$ is also false
$\therefore$ option (C) is not true.
(D) Only for case (i) and case (ii), q is true

For both cases, $(r \rightarrow p) \rightarrow q$ is true
$\therefore$ Option (D) is true
52. Instruction execution in a processor is divided into 5 stages. Instruction Fetch (IF), Instruction Decode (ID), Operand Fetch (OF), Execute (EX), and Write Back (WB). These stages take 5, 4, 20, 10, and 3 nanoseconds (ns) respectively. A pipelined implementation of the processor requires buffering between each pair of consecutive stages with a delay of 2 ns . Two pipelined implementation of the processor are contemplated:
(i) a naive pipeline implementation (NP) with 5 stages and
(ii) an efficient pipeline (EP) where the OF stage is divided into stages OF1 and OF2 with execution times of 12 ns and 8 ns respectively.

The speedup (correct to two decimal places) achieved by EP over NP in executing 20 independent instructions with no hazards is $\qquad$ .
52. Ans: 1.51

## Sol: For Naive pipelined CPU

$\mathrm{K}=5, \mathrm{~T}_{\text {seg }}=20+2=22 \mathrm{~ns}, \mathrm{n}=20$.

Total time needed for 20 instructions

$$
\begin{aligned}
=(5+20-1) \times 22 \mathrm{~ns} & =24 \times 22 \mathrm{~ns} \\
& =528 \mathrm{~ns}
\end{aligned}
$$

## For Efficient pipelined processor

$\mathrm{T}_{\text {seg }}=12+2=14 \mathrm{~ns} ; \mathrm{k}=6, \mathrm{n}=20$

Total time for 20 instructions

$$
(6+20-1) \times 14 \mathrm{~ns}=350 \mathrm{~ns} .
$$

Speed up $=\frac{\mathrm{t}_{\mathrm{n}}}{\mathrm{t}_{\mathrm{e}}}=\frac{528}{350}=1.50857$

$$
\cong 1.51
$$

53. Consider a database that has the relation schema CR(StudentName, CourseName). An instance of the schema CR is as given below.

| Sinc CR |  |
| :---: | :---: |
| Student Name | Course Name |
| SA | CA |
| SA | CB |
| SA | CC |
| SB | CB |
| SB | CC |
| SC | CA |
| SC | CB |
| SC | CC |

| SD | CA |
| :---: | :---: |
| SD | CB |
| SD | CC |
| SD | CD |
| SE | CD |
| SE | CA |
| SE | CB |
| SF | CA |
| SF | CB |
| SF | CC |

The following query is made on the database.
$\mathrm{T}_{1} \leftarrow \pi_{\text {CourseName }}\left(\sigma_{\text {StudentName }=\text { 'SA' }}(\mathrm{CR})\right)$
$\mathrm{T}_{2} \leftarrow \mathrm{CR} \div \mathrm{T}_{1}$
The number of rows in $T_{2}$ is $\qquad$ -
53. Ans: 4

Sol: The output of $\mathrm{T}_{1}$ is: CourseName
CA
CB
CC

The output of $\mathrm{T}_{2}$ is: StudentName
SA
SC
SD
SF
54. In a database system, unique timestamps are assigned to each transaction using Lamport's logical clock. Let $\mathrm{TS}\left(\mathrm{T}_{1}\right)$ and $\mathrm{TS}\left(\mathrm{T}_{2}\right)$ be the timestamps of transactions $\mathrm{T}_{1}$ and $\mathrm{T}_{2}$ respectively. Besides, $\mathrm{T}_{1}$ holds a lock on the resource R , and $\mathrm{T}_{2}$ has requested a conflicting lock on the same resource R . The following algorithm is used to prevent deadlocks in the database system assuming that a killed transaction is restarted with the same timestamp.

$$
\text { if } \operatorname{TS}\left(\mathrm{T}_{2}\right)<\operatorname{TS}\left(\mathrm{T}_{1}\right) \text { then }
$$

$\mathrm{T}_{1}$ is killed
else $T_{2}$ waits.
Assume any transaction that is not killed terminates eventually. Which of the following is TRUE about the database system that uses the above algorithm to prevent deadlocks?
(A) The database system is both deadlock-free and starvation-free
(B) The database system is deadlock-free, but not starvation-free
(C) The database system is starvation-free, but not deadlock-free
(D) The database system is neither deadlock-free nor starvation-free
54. Ans: (A)

Sol: The algorithm is wound-wait deadlock prevention strategy, hence deadlock free. As the killed transaction restarting with same time stamp, it is starvation free.
55. Consider a database that has the relation schemas EMP(EmpId, EmpName, DeptId), and DEPT(DeptName, DeptId). Note that the DeptId can be permitted to be NULL in the relation EMP. Consider the following queries on the database expressed in tuple relational calculus.
(I) $\{\mathrm{t} \mid \exists \mathrm{u} \in \operatorname{EMP}(\mathrm{t}[$ EmpName $]=\mathrm{u}[$ EmpName $] \wedge \forall \mathrm{v} \in \operatorname{DEPT}(\mathrm{t}[$ DeptId $] \neq \mathrm{v}[$ DeptId $]))\}$
(II) $\{\mathrm{t} \mid \exists \mathrm{u} \in \operatorname{EMP}(\mathrm{t}[$ EmpName $]=\mathrm{u}[$ EmpName $] \wedge \exists \mathrm{v} \in \operatorname{DEPT}(\mathrm{t}[$ DeptId $] \neq \mathrm{v}[$ DeptId $]))\}$
(III) $\{\mathrm{t} \mid \exists \mathrm{u} \in \operatorname{EMP}(\mathrm{t}[\mathrm{EmpName}]=\mathrm{u}[$ EmpName $] \wedge \exists \mathrm{v} \in \operatorname{DEPT}(\mathrm{t}[$ DeptId $] \neq \mathrm{v}[$ DeptId $]))\}$

Which of the above queries are safe?
(A) (I) and (II) only
(B) (I) and (III) only
(C) (II) and (III) only
(D) (I), (II) and (III)
55. Ans: (D)

Sol: A query in which the output is possibly infinite is said to be unsafe query. A safe expression yields a finite number of tuples as its result.

## General Aptitude

1. The probability that a k-digit number does NOT contain the digits 0,5 , or 9 is
(A) $0.3^{\mathrm{k}}$
(B) $0.6^{\mathrm{k}}$
(C) $0.7^{\mathrm{k}}$
(D) $0.9^{\mathrm{k}}$
2. Ans: (C)

Sol:

Each digit can be filled in 7 ways as 0,5 and 9 is not allowed so, each of these places can be filled by $1,2,3,4,5,6,8$.

So, required probability $=\left(\frac{7}{10}\right)^{\mathrm{k}}=(0.7)^{\mathrm{k}}$
02. Find the smallest number y such that $\mathrm{y} \times 162$ is a perfect cube.
(A) 24
(B) 27
(C) 32
(D) 36
02. Ans: (D)

Sol: Factorisation of 162 is $2 \times 3 \times 3 \times 3 \times 3$
$\mathrm{y} \times 162$ is a perfect cube
$y \times 2 \times 3 \times 3 \times 3 \times 3=$ Perfect cube

| 2 | 162 |
| :--- | :--- |
| 3 | 81 |
| 3 | 27 |
| 3 | 9 |
|  | 3 |

For perfect cube 2's and 3's are two more required each
(i.e.,) $2 \times 2 \times 2 \times 3 \times 3 \times 3 \times 3 \times 3 \times 3$

$$
y=2 \times 2 \times 3 \times 3=4 \times 9=36
$$

$\therefore$ The smallest number of $\mathrm{y}=36$.
03. Research in the workplace reveals that people work for many reasons $\qquad$ .
(A) money beside
(B) beside money
(C) money besides
(D) besides money
03. Ans: (D)

Sol: 'besides' means in addition to.
04. Rahul, Murali, Srinivas and Arul are seated around a square table. Rahul is sitting to the left of Murali. Srinivas is sitting to the right of Arul. Which of the following pairs are seated opposite each other?
(A) Rahul and Murali
(B) Srinivas and Arul
(C) Srinivas and Murali
(D) Srinivas and Rahul
04. Ans: (C)

Sol: From the given data, the following seated arrangement is possible around a square table.

$\therefore$ Srinivas and Murali are opposite to each other
05. After Rajendra Chola returned from his voyage to Indonesia, he $\qquad$ to visit the temple in Thanjavur.
(A) was wishing
(B) is wishing
(C) wished
(D) had wished

## 05. Ans: (C)

Sol: If the main clause is in the past the past tense, the subordinate clause also should be in the past tense.
06. Arun, Gulab, Neel and Shweta must choose one shirt each from a pile of four shirts coloured red, pink, blue and white respectively. Arun dislikes the colour red and Shweta dislike the colour white. Gulab and Neel like all the colours. In how many different ways can they choose the shirts so that no one has a shirt with a colour he or she dislikes?
(A) 21
(B) 18
(C) 16
(D) 14
06. Ans; (D)

Sol: Persons are Arun, Gulab, Neel and Shweta shirt colours are red, pink, blue and while
$\rightarrow$ Arun dislike red colour means he like remaining three other colours
$\rightarrow$ Shweta dislike white colour means he like remaining three other colours
$\rightarrow$ Gulab and Neel are likes all the four colours
$\therefore$ The total Number of ways to choose shifts $=3+3+4+4=14$
07. Six people are seated around a circular table. There are at least two men and two women. There are at least three right-handed persons. Every woman has a left-handed person to her immediate right. None of the women are right-handed. The number of women at the table is
(A) 2
(B) 3
(C) 4
(D) Cannot be determined
07. Ans: (A)

Sol: The total Number of peoples are sitting around a circular table is 6 , in which atleast 2 men, atleast 2 women and atleast three right handed persons are compulsory. From this data, the following circular form is possible.

$$
\begin{aligned}
& \mathrm{M}=\text { Male } \\
& \mathrm{W}=\text { Women } \\
& \mathrm{L}=\text { Left hand } \\
& \mathrm{R}=\text { Right hand }
\end{aligned}
$$

040-2323 4437 / 011-2953 3467
(3) +919397699966 Q
08. "The hold of the nationalist imagination on our colonial past is such that anything inadequately or improperly nationalist is just not history."

Which of the following statements best reflects the author's opinion?
(A) Nationalists are highly imaginative
(B) History is viewed through the filter of nationalism
(C) Our colonial past never happened
(D) Nationalism has to be both adequately and properly imagined
08. Ans: (B)

Sol: To refer is to reach an opinion. The right opinion of the author is 'History is viewed through the filter of nationalism' so $(B)$ is the right opinion of the author. The key words in the statement are 'history and nationalist imagination'.
09. A contour line joins locations having the same height above the mean sea level. The following is a contour plot of a geographical region. Contour lines are shown at 25 m intervals in this plot. If in a flood the water level rises to 525 m , which of the villages $\mathrm{P}, \mathrm{Q}, \mathrm{R}, \mathrm{S}, \mathrm{T}$ get submerged?

(A) P, Q
(B) P, Q, T
(C) R, S, T
(D) $\mathrm{Q}, \mathrm{R}, \mathrm{S}$

## 09. Ans: (C)

Sol: The given contour is a hill station, the peak point of this hill station is P , it is under a contour of 550. At floods, the water level is 525 m . So, the village of $\mathrm{R}, \mathrm{S}$ and T are under a contour of 500 . Therefore these villages are submerged.
10. The expression $\frac{(x+y)-|x-y|}{2}$ is equal to
(A) the maximum of $x$ and $y$
(B) the minimum of $x$ and $y$
(C) 1
(D) none of the above
10. Ans: (B)

Sol: $\frac{(x+y)+|x-y|}{2}$ $\qquad$
$|x-y|= \pm(x-y)$, if $(x-y)$ when $x>y$

$$
\text { if }-(x-y)=(y-x) \text { when } y>x
$$

$\frac{(x+y)+(x-y)}{2}=\frac{x+y-x+y}{2}$
$=\frac{2 y}{2}=y$
$=$ minimum of $(\mathrm{x}, \mathrm{y})$
as $(x>y)$
$\frac{(x+y)+(y-x)}{2}=\frac{x+y-y-x}{2}$
$=\frac{2 x}{2}=x$
$=$ minimum of $(x, y)$
as $\mathrm{x}<\mathrm{y}$
$\therefore$ Option (B) is correct.
