Assume both transformers to be ideal. The power factor of the load is 0.8 . If the wattmeter reading is 200 W , then the apparent power of the load in kVA is $\qquad$

Turns ratio of current transformer $(\mathrm{CT})\left(\frac{\mathrm{N}_{1}}{\mathrm{~N}_{2}}\right)_{\mathrm{CT}}=1: 5$
Let ' $V$ ' be the voltage across the given load.
'I' be the current through the given load.
Similarly let $\mathrm{V}_{\mathrm{d}}$ be the voltage across the wattmeter and $\mathrm{I}_{\mathrm{d}}$ be the current through the wattmeter
Given power factor $=0.8$ lag $[\because$ inductive load $]$
Given wattmeter reading $=\mathrm{W}_{1}=200 \mathrm{~W}$
But,
$\mathrm{W}_{1}=\mathrm{V}_{\mathrm{d}} \mathrm{I}_{\mathrm{d}} \times$ power factor
$200=\mathrm{V}_{\mathrm{d}} \mathrm{I}_{\mathrm{d}} \times 0.8$
$\Rightarrow \mathrm{V}_{\mathrm{d}} \mathrm{I}_{\mathrm{d}}=250 \mathrm{~V}_{\mathrm{A}} \rightarrow$ (1)
From the turns ratio of PT,
$\frac{\mathrm{V}}{\mathrm{V}_{\mathrm{d}}}=\left(\frac{\mathrm{N}_{1}}{\mathrm{~N}_{2}}\right)_{\mathrm{PT}}=\frac{200}{1}$
$\Rightarrow \mathrm{V}_{\mathrm{d}}=\frac{\mathrm{V}}{200} \rightarrow(2)$
From the turns ratio of $\mathrm{CT}_{1}$
$\frac{\mathrm{I}}{\mathrm{I}_{\mathrm{d}}}=\left(\frac{\mathrm{N}_{2}}{\mathrm{~N}_{1}}\right)_{\mathrm{CT}}=\frac{5}{1}$
$\Rightarrow \mathrm{I}_{\mathrm{d}}=\frac{\mathrm{I}}{5} \rightarrow$ (3)
Substituting (2) and (3) in (1) we get,
$\left(\frac{\mathrm{V}}{200}\right)\left(\frac{\mathrm{I}}{5}\right)=250 \mathrm{VA}$
$\mathrm{VI}=250 \times 10^{3} \mathrm{VA}$

03. What is the value of $x$ when $81 \times\left(\frac{16}{25}\right)^{x+2}+\left(\frac{3}{5}\right)^{2 x+4}=144$ ?
(A) 1
(B) -1
(C) -2
(D) Cannot be determined
03. Ans: (B)

Sol: $81 \times\left(\frac{16}{25}\right)^{x+2} \div\left(\frac{3}{5}\right)^{2 x+4}=144$
$\frac{\left(\frac{16}{25}\right)^{x+2}}{\left(\frac{3}{5}\right)^{2 x+4}}=\frac{144}{81}=\frac{(12)^{2}}{(9)^{2}}=\left(\frac{12}{9}\right)^{2}$
$\frac{\left(\frac{4}{5}\right)^{2 x+4}}{\left(\frac{3}{5}\right)^{2 x+4}}=\left(\frac{12}{9}\right)^{2}$
$\frac{(4)^{2 x+4}}{(5)^{2 x+4}} \times \frac{(5)^{2 x+4}}{(3)^{2 x+4}}=\left(\frac{12}{9}\right)^{2}$
$\frac{(4)^{2 x+4}}{(3)^{2 x+4}}=\left(\frac{12}{9}\right)^{2}=\left(\frac{4}{3}\right)^{2}$
$\left(\frac{4}{3}\right)^{2 x+4}=\left(\frac{4}{3}\right)^{2}$
$2 \mathrm{x}+4=2$
$2 \mathrm{x}=-2$
$\mathrm{x}=-1$
04. The event would have been successful if you $\qquad$ able to come.
(A) are
(B) had been
(C) have been
(D) Would have been
04. Ans: (B)

Sol: Conditional tense type (3 had+V3 +would have +V3)
05. There was no doubt that their work was thorough

Which of the words below is closet in meaning to the underlined word above?
(A) pretty
(B) complete
(C) sloppy
(D) haphazard
05. Ans: (B)

Sol: Through means including every possible detail, parts or complete or absolute.
06. $\mathrm{P}, \mathrm{Q}, \mathrm{R}, \mathrm{S}, \mathrm{T}$ and U are seated around a circular table, R is seated two places to the right of $\mathrm{Q}, \mathrm{P}$ is seated three places to the left of R.S is seated opposite U. If P and U now switch seats, which of the following must necessarily be true?
(A) P is immediately to the right of R
(B) T is immediately to the left of P
(C) T is immediately to the left of P or P is immediately to the right of Q
(D) U is immediately to the right of R or P is immediately to the left of $T$

## 06. Ans: (C)

Sol: From the given data, all are seated around a circular table as follows P Q - R

S is opposite to U

P and U are switch seated means, they are interchange their places

In option (C), before interchange T is immediately to the left of P and After interchange P is immediately to the right of Q
$\therefore$ Option ' C ' is correct
07. Budhan covers a distance of 19 km in 2 hours by cycling one fourth of the time and walking the rest. The next day he cycles (at the same speed as before) for half the time and walks the rest (at the same speed as before) and covers 26 km in 2 hours. The speed in km/h at which Budhan walks is
(A) 1
(B) 4
(C) 5
(D) 6
07. Ans: (D)

Sol:

$$
19 \mathrm{~km} \rightarrow 2 \mathrm{hrs} \text { Cycling } \Rightarrow \frac{1}{4} \text { th }=2 \times \frac{1}{4}=\frac{1}{2}
$$

Let cycling speed $=\mathrm{C}$
Walking speed $=\mathrm{W}$

$$
\begin{equation*}
\frac{C}{2}+\frac{3 W}{2}=19 . \tag{i}
\end{equation*}
$$

$\mathrm{C}+\mathrm{W}=26$.
By solving equation no (i) and (ii)
$\mathrm{W}=6 \mathrm{~km} / \mathrm{hr}$
$\therefore$ The speed at which Budhan walks $=6 \mathrm{kmph}$
08. A map shows the elevation of Darjeeling, Gangtok, Kalimpong, Pelling, and Siliguri, Kalimpong is at a lower elevation than Gangtok. Pelling is at a lower elevation than Gangtok. Pelling is at a higher elevation than siliguri. Darjeeling is at a higher elevation than Gangtok.

Which of the following statements can be inferred from the paragraph above?
i. Pelling is at a higher elevation than Kalimpong
ii. Kalimpong is at a lower elevation than Darjeeling
iii. Kalimpong is at a higher elevation than Siliguri
iv. Siliguri is at lower elevation than Gangtok
(A) Only ii
(B) Only ii and iii
(C) Only ii and iv
(D) Only iii and iv
08. Ans: (C)
09. Bhaichung was observing the pattern of people entering and leaving a car service centre. There was a single window where customers were being served. He saw that people inevitably came out of the centre in the order that they went in. However, the time they spent inside seemed to vary a lot:

Some people came out in a matter of minutes while for others it took much longer.
From this, what can one conclude?
(A) The centre operates on a first-come - first-served basis, but with variable service times, depending on specific customer needs.
(B) Customers were served in an arbitarary order, since they took varying amounts of time for service completion in the centre.
(C) Since some people came out within a few minutes of entering the centre, the system is likely to operate on a last-come-first-served basis.
(D) Entering the centre early ensured that one would have shorter service times and most people attempted to do this.

## 09. Ans: (A)

Sol: The key sentence is "the order that they went in"
10. The points in the graph below represent the halts of a lift for durations of 1 minute, over a period of 1 hour.

Which of the following statements are correct?

i. The elevator never moves directly from any non-ground floor to another non-ground floor over the one hour period
ii. The elevator stays on the fourth floor for the longest duration over the one hour period
(A) Only I
(B) Only ii
(C) Both i and ii
(D) Neither i nor ii
10. Ans: (D)

Sol: (i) is in correct as it has move directly
(ii) is incorrect as it stayed for maximum duration on the ground floor
